

TRAILER-MOUNTED TWO-STATION SYSTEM

2in1 Eurojumper Mobile

A road-mobile bungee trampoline built for event operators and rental businesses.

BUILT TO MOVE. READY TO OPERATE.

2

STATIONS

24

CUSTOMERS / HOUR

760 kg

TRANSPORT WEIGHT

1

OPERATOR

Turn changing locations into one scalable operating model. The structure, trampoline beds and lifting system travel together on an integrated trailer, reducing separate transport handling between events.

MOBILE BUSINESS FORMAT

One road-going unit. Multiple revenue locations.

The 2in1 Eurojumper Mobile combines two commercial jumping stations with a trailer-integrated base. It is designed for operators who relocate during the season and need one compact transport package for fairs, festivals and customer events.

A strong fit for

- event companies and rental fleets
- festivals, fairs and public events
- seasonal touring operations
- multi-venue schedules
- compact road transport

Technical snapshot

Stations	2	Setup	1 person / approx. 2 h
Operating footprint	approx. 14 x 4 m	Operators	1 person
System height	6 m	Capacity	up to 24 customers / h
Transport dimensions	4.9 x 2.35 x 1.5 m	Power supply	230 V
Transport weight	approx. 760 kg	Trailer	EU homologated

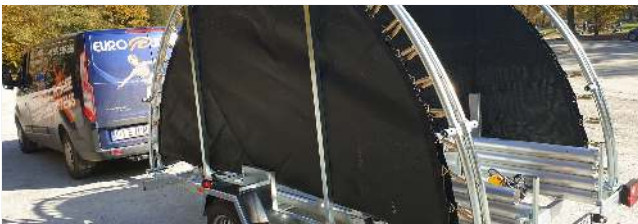

OPERATING AND ROAD NOTE

Hourly capacity is a theoretical maximum. Confirm the towing vehicle, driving licence, registration and local road requirements for the destination country before delivery.

TRAILER-INTEGRATED ENGINEERING

Designed around the trailer.

The zinc-coated base and road trailer form one transport unit. Foldable trampoline beds, modular aluminium poles and integrated operating components reduce loose cargo and support recurring setup across multiple venues.

1 Integrated trailer base

The zinc-coated structural base is permanently integrated with the trailer, creating one transport platform for the complete two-station system.

2 Road-ready documentation

The trailer is supplied with EU homologation, a Certificate of Conformity and an individual VIN. LED rear lights improve road visibility.

3 Foldable 4 m trampoline beds

Two galvanized 4 m trampoline frames can be folded with the trailer package for transport or detached when the operating plan requires it.

4 Commercial operating components

Two 1050 W, 230 V winches lift the users. Braided cords are standard for durability; latex cords are optional for a more dynamic jump.

OPERATIONAL DISCIPLINE

Inspect harnesses, bungee cords, ropes, connectors, winches and trampoline components before operation. Use and maintenance must follow the supplied manual and the limits stated for the delivered configuration.

SCOPE OF SUPPLY

A complete operating package.

The final scope is confirmed in your individual offer, including trailer documentation, current configuration, lead time and delivery cost.

Standard package

- complete zinc-coated steel and aluminium structure
- integrated trailer with LED rear lights
- 2 x 4 m trampolines
- 2 x 1050 W winches with lifting ropes
- bungee cord set for two stations
- 2 harnesses in agreed sizes: XS, S, M or L
- manual, direct support and warranty package*

*Terms and exclusions follow the current warranty policy.

TRAILER DOCUMENTATION

EU homologation e32*2007/46*0210*01,
COC, individual VIN and LED rear lights.

From enquiry to delivery

1

Share the essentials

Delivery country, towing vehicle, registration market, site dimensions and expected visitor flow.

2

Receive one clear proposal

Recommended configuration, current price, lead time, transport and documentation list.

3

Confirm and prepare delivery

Order confirmation, production, quality control and worldwide transport coordination.
